

# Full Contract Management Service Overview

Your Waste, Fully Managed. Costs Reduced.  
Performance Guaranteed.

An end-to-end service that reduces waste costs,  
improves system performance, and delivers  
ongoing optimisation.

# Why Full Contract Management?

For many organisations, waste systems are:

- ✓ Complex
- ✓ Multi-site
- ✓ Hard to monitor

## This creates:

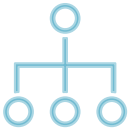

- Hidden costs
- Inconsistent performance
- Fragmented reporting
- Supplier lock-ins

“Most businesses don’t have the time or resources to monitor waste systems at scale. Our full contract management offering solves that; we handle it all, driving cost reduction and system improvement while you focus on your core business.”

Peter Goodwin - MD and Founder, co-cre8

# What co-cre8 Delivers

## **Waste system audit and redesign:**

We assess your current waste setup, identifying inefficiencies and redesigning systems to improve flow, segregation, and cost-effectiveness.

## **Contract negotiations and supplier management:**

We leverage our expertise and industry connections to secure the best supplier terms, ensuring you get maximum value and flexibility.

## **Implementation of optimised bin systems, routes, schedules:**

We roll out a tailored bin and collection system designed to match your waste profile, reducing unnecessary collections and costs.

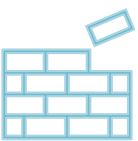

## **Reporting and analytics dashboards:**

We provide a regularly updated dashboard with reporting, insights, and ESG-specific elements to give you meaningful visibility and control over your waste system's performance.

## **Quarterly or biannual performance reviews:**

We regularly review system performance with you, identifying new opportunities for savings, efficiency, and sustainability improvements.

## **Ongoing optimisation and continuous improvement:**

We stay involved, continuously refining your system to keep costs low and performance high as your business and waste regulations evolve.

# Why Work with co-cre8

## **Decades of Experience:** Packaging, waste systems, circular economy expertise

co-cre8's leadership and team bring together decades of hands-on experience working across every stage of the waste and materials lifecycle. We understand not only how waste systems operate on the ground, but also how upstream choices – in packaging, procurement, and materials – shape downstream costs and sustainability impacts. From designing award-winning recycling schemes to advising on circular economy transitions, our expertise ensures your business benefits from the latest innovations, regulatory insights, and industry best practices.

## **Technology-Driven:** AI-supported models for real-time optimisation

We don't rely on spreadsheets or static reviews – we apply advanced, technology-led tools to model waste system performance in real time. Our AI-supported analysis identifies inefficiencies, predicts savings opportunities, and simulates improvements across collection routes, bin placements, waste segregation, and material flow optimisation. This data-driven approach gives you evidence-backed recommendations and continuously updated insights, ensuring you stay ahead of changing operational needs.

## **Procurement Influence:** Shaping materials entering your system

Unlike most waste managers who focus solely on what leaves your site, co-cre8 looks upstream to the materials and products entering your system. We bring specialist packaging and procurement expertise, allowing us to advise on packaging material selection, supplier contracts, and sustainable alternatives that reduce waste generation at source. By influencing procurement-level decisions, we help you design waste out of the system before it even reaches the bin.

## **End-to-End Accountability:** Your outsourced waste management team

With our full contract management model, Co-cre8 acts as your dedicated outsourced waste management partner. We take full responsibility for supplier performance management, day-to-day operations, reporting, compliance, and continuous improvement, so you can focus on your core business with confidence.

Businesses that outsource contract management see an average cost saving of 15–25% over three years.

– **Supply Management UK, 2024**

# The Strategic Advantage

**Resilience:** co-cre8's proactive approach ensures your business stays fully compliant with evolving waste regulations, including mandatory segregation and recycling targets. We help future-proof your operations by identifying risks early and embedding adaptive practices that protect your reputation and bottom line.

**Visibility:** We equip you with clear, consolidated reporting dashboards that provide valuable insights into your waste system's performance, including ESG-specific metrics. This transparency empowers you to make informed decisions, track progress, and demonstrate value to internal stakeholders and external partners.

**Sustainability:** Our services go beyond cost savings — we help you increase recycling rates, divert waste from landfill, and advance your broader ESG and sustainability goals. By integrating circular economy principles, we support your journey toward a more responsible and resource-efficient business model.

**Focus:** By taking on the complexity of waste system management, co-cre8 frees up your internal teams to concentrate on what they do best. We act as your expert partner, reducing internal burden while ensuring your waste operations deliver consistent financial, operational, and environmental benefits.

"The magic isn't just in reducing costs today — it's in creating a system that stays efficient and resilient for years."

Wayne Basham – Operations Director, co-cre8

## Ready to Take Control?

With co-cre8 Full Contract Management, you get expert, hands-on support that saves money, improves systems, and strengthens sustainability performance.
